Project Supervisor

Title: Project Supervisor

Location: Crofton, MD

Reporting Manager: Operations Manager

Basic Purpose of Position: The Project Supervisor will work with assigned Project Managers to coordinate and deliver multiple, simultaneous projects of various complexities ranging from \$20K-\$3M within the project schedule and financial budget.

Responsibilities:

A key member of the Albireo team, the Project Supervisor will be responsible for providing the execution for HVAC Building Automation projects, to include:

- With minimal supervision, oversee and manage 3rd party installation contractors for the installation and wiring of networks and equipment.
- Coordinate the timely ordering and delivery of material to align with the installation requirements and financial responsibilities.
- Review prepared engineering submittals with onsite equipment and conditions to ensure accurate control applications and wiring requirements. Coordinate with the Project Manager and engineering team for any required changes.
- Provide system checkout, calibration, and minor programming for network communications, controllers, end devices, user interfaces, 3rd party integration and sequence of operations.
- Coordinate the efforts of the Software Engineers and System Specialists to achieve a fully functional and commissioned system within the project schedule and estimated hours.
- Work with 3rd party commissioning agents for system witness testing.
- Participate in project meetings and regular company construction meetings.
- Provide project coordination and cooperation with our customers (end users, owners, owner reps, general contractors, and mechanical contractor) as required to provide overall customer satisfaction and project success.

Qualifications:

- Minimum 5 years of experience in the setup and commissioning of complex DDC control systems applied to HVAC applications in the commercial, pharmaceutical, and data center industry.
- Ability to read and understand MEP drawings and specifications, electrical drawings, network and control wiring diagrams.
- Knowledge of industry standard communication protocols; Ethernet, Modbus, BacNet and Lon.
- Strong troubleshooting skills, computer skills, communication, written, and organizational skills required.
